MOHANREDDY KONDREDDY

Java Full Stack Developer

mohanreddykondreddy75@gmail.com | Phone: (314) 267 5563 | LinkedIn | GitHub

SUMMARY

Java Full Stack Developer with 5 years building and running business-critical enterprise systems in healthcare, financial services, and retail. Builds Java 17 / Spring Boot microservices, REST/SOAP web service integrations, and React applications on Oracle, DB2, and PostgreSQL, and applies Generative AI (Spring AI, RAG, LLMs, prompt engineering) to product features, developer productivity, and legacy modernization.

SKILLS

Programming Languages: Java (8, 11, 17), JavaScript (ES6), SQL, Python
Generative AI: Spring AI, OpenAI, Claude, LLM Integration, RAG, Vector Databases, Prompt Engineering, GitHub Copilot
Backend: Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, Spring Security, J2EE, JDBC, Maven, Gradle, IBM RAD
Business Rule Engine: RedHat Drools, Oracle Intelligent Advisor (formerly Oracle Policy Automation), Corticon
Frontend Development: React.js, Redux Toolkit, Tailwind CSS, Bootstrap, Responsive Web Design
Microservices & APIs: Microservices Architecture, RESTful APIs, GraphQL, OpenAPI, Distributed Systems, SOAP/REST Web Services, Enterprise Integration
Messaging & Databases: Oracle, IBM DB2, PostgreSQL, MySQL, Redis, Elasticsearch, Apache Kafka, Schema Registry
Cloud Platforms: AWS (EC2, S3, RDS, Lambda, ECS, EKS, API Gateway, IAM, CloudWatch), Azure
DevOps & Infrastructure: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD, Infrastructure as Code (IaC), Git, GitHub, RedHat OpenShift
Testing & Tools: JUnit 5, SoapUI, SonarQube, Splunk, Prometheus, Grafana, Application Insights
Development Practices: Agile/Scrum, SDLC, Code Reviews, Performance Optimization, Root Cause Analysis

EXPERIENCE

Deloitte | Java Developer | Client: Illinois HealthCare (IES)| USA **May 2026 – Present**

- Own root cause analysis for production defects in the system that determines **Medicaid, SNAP, and TANF** benefits for millions of Illinois residents, tracing failures across **Java** code, **DB2** data, and business rules to permanent fixes.
- Fix **Java/EJB** batch defects and correct invalid **DB2** data with targeted **SQL**, restoring accurate benefit decisions without interrupting live runs.
- Apply **Generative AI** (**GitHub Copilot, Claude**) to map legacy code, document hidden business rules, and generate unit tests and **SQL**, shortening analysis time on modernization and defect work.
- Separate true code bugs from environment and data issues, avoiding unnecessary releases; update **Corticon** decision tables and validate fixes end to end with **SoapUI** and **IBM RAD**.
- Collaborate with **business analysts** and **QA** engineers to reproduce defects, confirm expected behavior, and coordinate production deployments with zero service disruption.
- Contribute to modernization of legacy eligibility components, refactoring **J2EE/EJB** logic into **Java 17 / Spring Boot REST services**.
- Author **RCA** reports and technical design notes for defect fixes and modernization changes, giving **business analysts**, **QA**, and leads a clear record of **root cause**, impact, and resolution.

Morgan Stanley | Full Stack Developer | USA **Apr 2025 – Apr 2026**

- Designed and built **Java 17** / **Spring Boot** microservices and **REST APIs** for loan origination and credit risk, enabling automated risk scoring and compliance checks.
- Built a **GenAI** policy assistant using **Spring AI, OpenAI LLMs, RAG**, and a vector database, with **prompt engineering** for grounded, source-cited answers across lending policies, risk guidelines, and compliance documentation.
- Engineered **Kafka** pipelines with **Schema Registry**, idempotent consumers, and retries, reliably processing ~35K loan and account events per day without duplicate processing.
- Automated **AWS** provisioning (**EKS, EC2, RDS, S3, IAM**) with **Terraform**, cutting environment setup from 2 hours to 12 minutes.
- Partnered with loan analysts and product owners to simplify fragmented workflows, building **React** / **Redux** Toolkit screens integrated with **REST APIs** that gave analysts one place to review loan, risk, and compliance data.
- Accelerated latency-sensitive lending services by optimizing **Spring Boot, PostgreSQL, and Redis** through query tuning and caching, reducing **p95 API latency by 32%** across critical workflows.

Deloitte | Analyst | Client: California Healthcare (Covered California / CalHEERS) | India **Jul 2021 – Jul 2023**

- Modernized enterprise decision engines by migrating **35,000+** business rules from **Oracle Intelligent Advisor (formerly Oracle Policy Automation) to RedHat Drools** using **Java and Spring**, stabilizing rule-driven eligibility and decision workflows across high-volume production applications.
- Engineered secure **Java and Spring Boot RESTful microservices** and deployed application workloads on **AWS EC2**, enabling integration across healthcare benefits and compliance systems.
- Automated complex decision workflows by developing, validating, and integrating **Drools rule sets** with backend microservices, translating business requirements into maintainable rule logic and improving eligibility-processing consistency.
- Migrated enterprise data workloads from **Oracle Database to PostgreSQL**, redesigning schemas, queries, and indexing strategies.
- Strengthened healthcare integrations using **SoapUI** for REST/SOAP API validation and **AWS CloudWatch, ELK Stack, and RedHat OpenShift** for centralized monitoring and logging, improving production troubleshooting and incident resolution.
- Streamlined cloud delivery using **AWS (EC2, RDS, S3, IAM), Jenkins, Docker, Kubernetes** and **Git**, automating application deployments across development, testing, and production environments while supporting scalable infrastructure operations.

KPIT | Software Engineer | India **May 2020 – Jun 2021**

- Developed **Java** / **Spring Boot** services and **React** features for a retail commerce platform with 50K+ SKUs, covering catalog, cart, checkout, order management, and inventory.
- Optimized **Spring Boot REST APIs** and pricing/ order queries, reducing **average API response time by 22%**.
- Enhanced customer-facing interfaces with **React.js, HTML5, and CSS3**, improving product discovery and order tracking while cutting **page-load time by 20%**.
- Integrated **Apache Kafka** for processing order, payment, and inventory events in real time.
- Automated CI/CD and monitoring using **Azure DevOps, Maven, Git,** shortening **deployment time by 30%** and increasing release consistency.

EDUCATION

Master of Science in Computer Science and Information Systems **2025**
Saint Louis University, Saint Louis, MO GPA: 3.84/4.0

Bachelor of Technology in Computer Science and Engineering **2020**
Alliance University, Bengaluru, KA, India GPA: 3.40/4.0

CERTIFICATIONS

- AWS Solutions Architect – Associate
- Automation with Drools
- Docker Certified Associate (DCA)
